

# Fans and motors for refrigerated display cases

Product Catalogue 2019-07

**ebm**papst

the engineer's choice

## Fans and motors for refrigerated display cases

Refrigeration applications in supermarkets make very exacting demands on the technologies used. Alongside great energy efficiency, the most important properties include high reliability and a long service life. Hygiene and product protection are however also absolutely essential. And in certain cases, there is a need to find an appropriate solution for extreme temperatures and particularly confined spaces.

Our fans excel in all these respects. They also offer extremely good performance and smooth operation. Which makes them ideal for use specifically in the refrigeration and freezer sector. **ebm-papst** can supply a broad product portfolio of energy-saving fans for all areas of application.

# About ebm-papst.

ebm-papst is a leader in ventilation and drive engineering technology and a much sought-after engineering partner in many industries. With around 20,000 different products, we have the perfect solution for practically every requirement. We have placed the highest emphasis on economy and ecology for many years.

We believe the consistent further development of our highly-efficient GreenTech EC technology provides our customers with the best opportunities for the future in industrial digitization. With GreenIntelligence, ebm-papst already offers intelligent networked complete solutions that are unique anywhere in the world today and that secure our customers a decisive advantage.

## Six reasons that make us the ideal partner:

### Our systems expertise.

You want the best solution for every project. The entire ventilation system must thus be considered as a whole. And that's what we do – with **motor technology** that sets standards, sophisticated **electronics** and **aerodynamic** designs – all from a single source and perfectly matched.

### Our spirit of invention.

We are also always able to develop customized solutions for you with our versatile team of over 600 engineers and technicians.

### Our lead in technology.

We are not only pioneers and trailblazers in the development of highly efficient EC technology, we also recognized the opportunities of digitization at an early stage. Therefore, we can offer solutions today that combine the highest energy efficiency with the advantages of IoT and digital networking.

### Closeness to our customers.

ebm-papst has 25 production locations worldwide (including facilities in Germany, China and the USA), together with 49 sales offices, each of which has a dense network of sales representatives. You will always have a local contact, someone who speaks your language and knows your market.

### Our standard of quality.

Our quality management is uncompromising, at every step in every process. This is underscored by our certification according to international standards including DIN EN ISO 9001, TS declaration of conformity and DIN EN ISO 14001.

### Our sustainable approach.

Assuming responsibility for the environment, for our employees and for society is an integral part of our corporate philosophy. We develop products with an eye to maximum environmental compatibility, in particular resource-preserving production methods.

We promote environmental awareness among our young staff and are actively involved in sports, culture and education. That's what makes us a leading company – and an ideal partner for you.

# *The story of our success* to market and technology pioneer.

- 1963** Founding of **Elektrobau Mulfingen GmbH & Co. KG** by Gerhard Sturm and Heinz Ziehl.
- 1965** First tubeaxial fan developed in EC/DC technology.
- 1966** ebm-papst's success takes off with the new 68 motor.
- 1972** The first ebm foreign subsidiary is established in Sweden.
- 1988** Gerhard Sturm is awarded the Federal Cross of Merit.
- 1990** The sixty-millionth external-rotor fan is produced.
- 1992** Acquisition of **PAPST Motoren GmbH** in St. Georgen.
- 1997** Buyout of the **Landshut** (mvl) plant.
- 1998** Development of first fans with integrated electronics.
- 2003** Change of name to **ebm-papst**.
- 2008** The **HyBlade®** range of fans sets new efficiency standards.
- 2010** **GreenTech** – our sign for energy efficiency and resource preservation.
- 2011** **RadiCal** defines a new standard for EC centrifugal fans.
- 2013** ebm-papst takes over the gearbox specialist Zeitlauf and wins the **German Sustainability Award**.
- 2014** Team partnership with Mercedes-AMG Petronas Formula 1 team.
- 2015** **RadiPac** pushes the limits of efficiency.
- 2016** **AxiBlade** sets new standards in ventilation, refrigeration and air-conditioning.
- 2017** Factory expansions Germany: logistics center in Hollenbach and production unit in Hagenmoos.
- 2018** **GreenIntelligence** becomes the new byword for smart complete solutions.

# The ideal solution for all refrigerated display cases.

## Keep cool – even when the requirements are very special.

Refrigeration applications in supermarkets pose special challenges on the technology used. Apart from high energy efficiency, high reliability and long service life are the most important properties. But hygiene and goods protection are also absolutely necessary. In some cases, a suitable solution must also be found for extreme temperatures or particularly tight spaces.

## Compact energy-saving fans for refrigerated display cases and freezer cabinets.

Our fans with GreenTech EC technology score excellently in all these points. And they deliver impressively high performance at low noise levels. This makes them ideally suited for normal refrigeration or freezer applications.

No matter the application, ebm-papst provides a broad and consistent product portfolio of energy-saving EC fans. Axial fans are designed for installation beneath the shelves in refrigerated display cases and freezer cabinets, for example. On the other hand, we designed our diagonal fans especially for the back walls of refrigerated display cases and the tight installation situation they often present. Thanks to their extremely flat design, they fit into even the smallest gaps to enable optimum operation.

ebm-papst motors and fans prove their excellence in a wide range of refrigerated display cases and freezer cabinets in supermarkets. What all our solutions have in common: They continuously set new standards, whether it's lowering energy consumption, extending service life, reducing noise or when it comes to speed control and monitoring. Our motors and fans for refrigeration and air-conditioning are able to look back at a long history of success. Write the next chapter in the story and discover the highly innovative, reliable solutions available at ebm-papst.

# Saving energy has no closing time.

## An investment that quickly pays off.

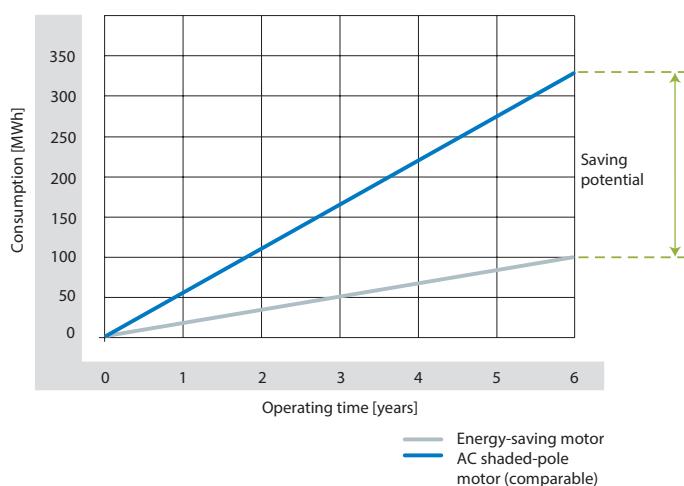

Refrigeration systems such as the refrigerated display cases in supermarkets are typically in operation 24/7. Obviously, the energy they consume is a major cost factor. Nowadays, it is more important than ever to save energy. The fans in these systems have long operating times, making them prime candidates for major energy savings. **ebm-papst** fans are highly efficient, which not only translates into environmental benefits. Ultimately, efficiency has a positive impact on end users' budgets as well. After all, one of the fans' most outstanding properties is their tremendous energy efficiency. And the more fans in use, the greater the potential for savings. Refrigerated display cases are the perfect example.

## Small calculation example.

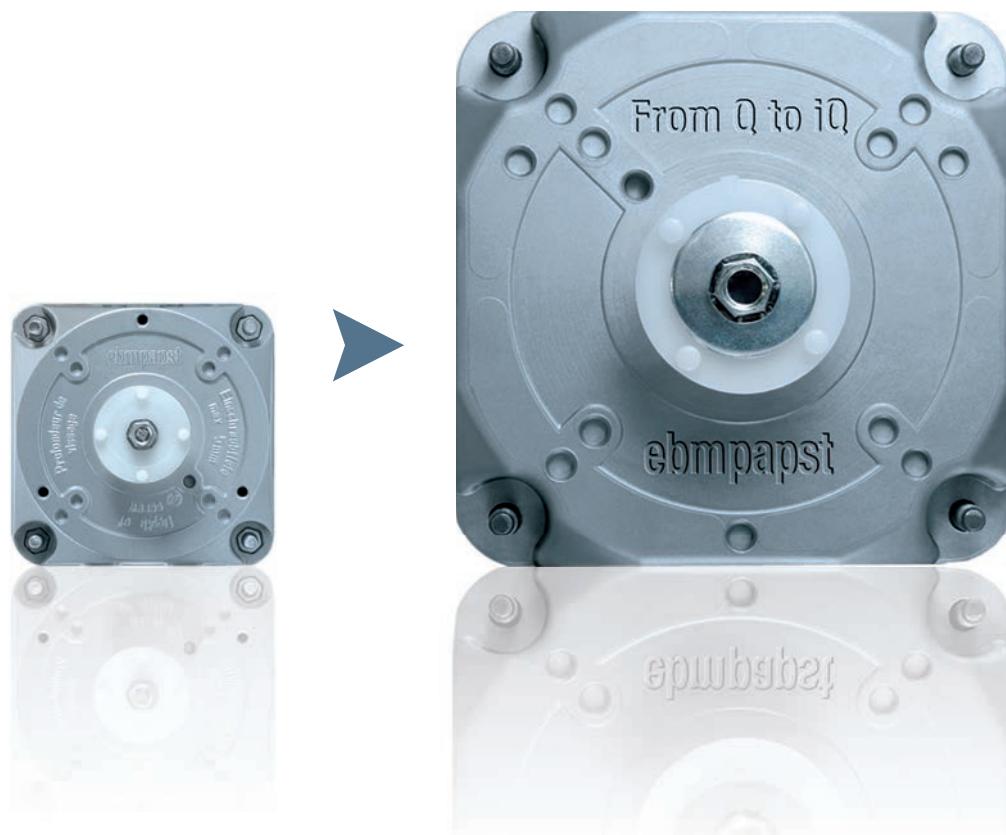

Per running meter, two fans typically operate in a refrigerated display case. If 200 GreenTech EC fans in size 200 are used in a typical supermarket with a total of 100 meters of refrigerated display cases, the energy savings compared to conventional shaded-pole motors would be 70%. Their higher efficiency results in lower intrinsic heat of the energy-saving motor, thus a reduction in operating costs. Every year, this results in a savings potential of 38 MWh and 22 t CO<sub>2</sub>. For the environment, this means more than 22 t less carbon emissions (with today's typical energy mix).

**At the same time, at an electricity price of 0.1169 €/kWh, users have annual savings of over €4,400.** This makes converting existing systems highly profitable, since the investment pays for itself in less than 12 months.

Even small supermarkets benefit from this investment: 40 GreenTech EC fans would save over 9.4 MWh per year. That equals 5.6 t CO<sub>2</sub> and at the electricity price mentioned above, a €1,080 saving on costs. Energy-saving potential in all areas.

# Quick, simple, retrofit: 1:1 replacement with NiQ.

Even today, many fans are still driven by uncontrolled asynchronous motors. Their comparatively low efficiency has an effect on energy consumption in almost all applications. With ebm-papst, you can replace typically inefficient fans containing AC motors 1:1 with highly efficient EC technology of the same mechanical design.

EC motors are extremely efficient, unbeatably compact and run very smoothly. Switching from AC to EC fans not only pays for the environment and user budgets, it also enhances comfort.

## The latest generation of energy-saving motors.

Many renowned supermarket chains already use our proven iQ motors today and successfully save energy. In the latest generation, the NiQ, we have not only enhanced the existing advantages but have also added new ones. A modified winding technique and optimized material selection allowed us to improve the product's properties.

With the plastic used, approval in applications involving indirect contact with food (for example in open vegetable display cases) is possible. And in addition to making operations more economical, the NiQ solution was designed to further increase efficiency. Thanks to GreenTech EC technology, it delivers up to 70% more efficiency compared to our old motor concept. Even compared to the iQ and iQ<sup>2</sup>, we were able to increase efficiency in some areas while extending service life and reducing noise.

#### Ready to retrofit.

Its many benefits and cost savings compared to older motors make our NiQ the first choice when it comes to new developments. But retrofitting existing applications with them also pays off after just a short time. Since the NiQ is mechanically compatible with both shaded-pole motors and the iQ motor series and has the same installation dimensions, 1:1 replacement is possible. This makes ecological and economical sense.

# Clear statement: the EU regulation on fluorinated greenhouse gases.

The use of fluorinated greenhouse gases has been officially regulated since 2006. Regulation (EU) 517/2014, also known as the Fluorinated Gas Regulation, has been in force since 1 January 2015. It specifies a reduction in the emission of fluorinated greenhouse gases by 70 million tons of CO<sub>2</sub>-equivalent to 35 million tons of CO<sub>2</sub>-equivalent in the EU by 2030. And it is also designed to support the use of alternatives such as natural refrigerants.

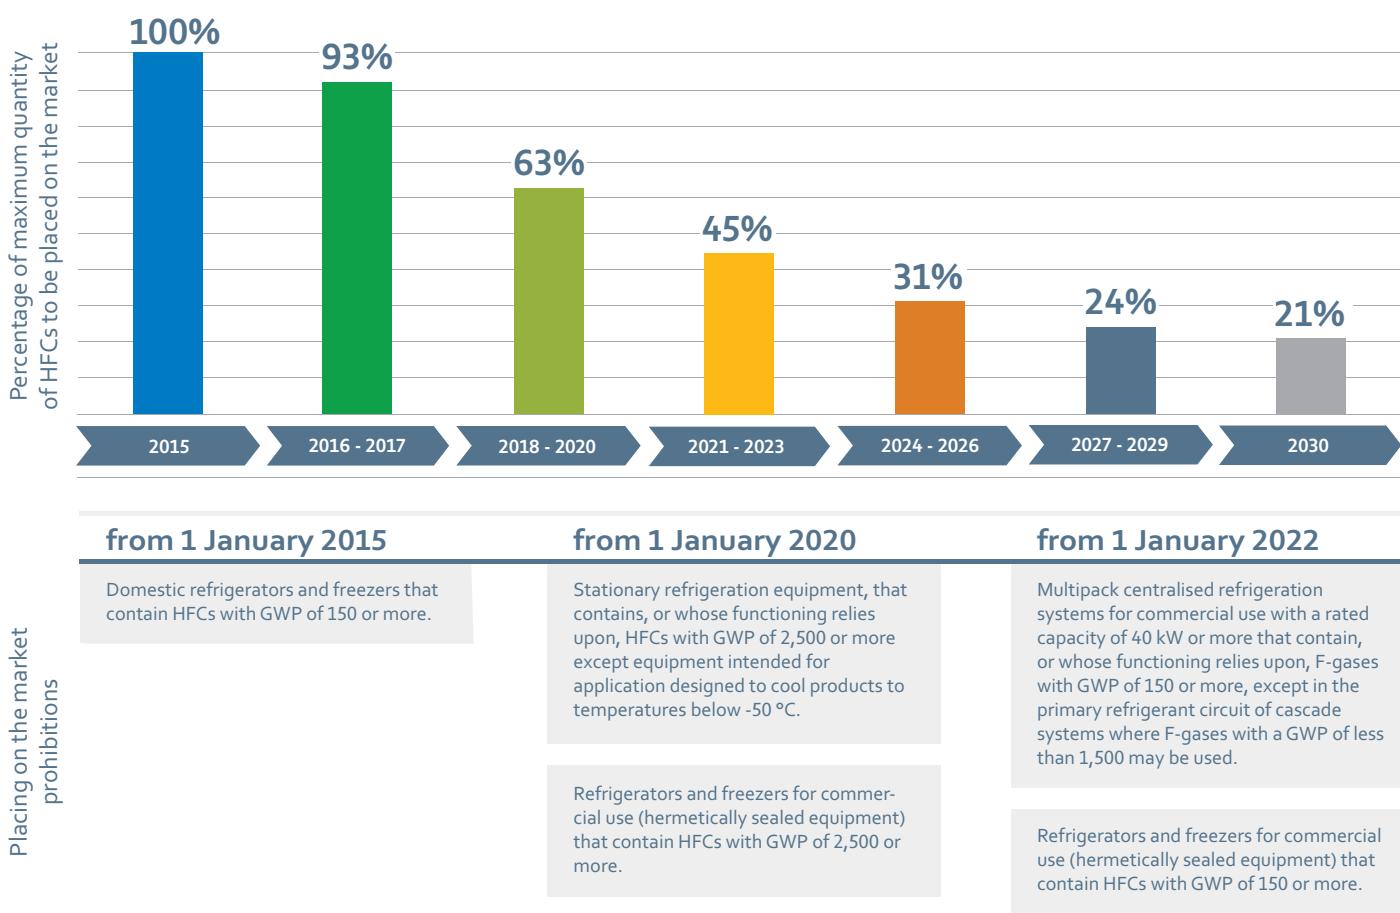

## HFC phasedown.

Another major issue with regard to refrigerated display cases is the refrigerant they use. Partially fluorinated hydrocarbons (HFC) are often used, but they severely damage the climate and contribute to increasing the greenhouse effect. The relative contribution of a refrigerant to the greenhouse effect is called Global Warming Potential (GWP) and expressed in CO<sub>2</sub> equivalents. In fact, commercial refrigeration plants are the biggest source of HFC emissions in Germany. The industry emitted 3.4 million tons of CO<sub>2</sub>-equivalent in 2006,

which is almost 35% of total German HFC emissions. This is why the use and phasedown of HFC are officially regulated.

## In effect: EU regulation no. 517/2014.

The figure below shows the steps involved in official regulation and the prohibitions that have gone into effect.

# The alternative: *natural refrigerant.*

## Stop and rethink.

In the wake of the Fluorinated Gas Regulation, the choice of refrigerant has gained in importance. As environmentally friendly alternatives to HFC, natural refrigerants such as propane (P290) and carbon dioxide CO<sub>2</sub> (R744) are increasingly popular. They enjoy virtually unlimited availability, have a minimal global warming potential and ensure a beneficial climate balance in refrigerated display cases. When malfunctions occur, flammable refrigerants such as R290 (refrigerants of safety class A3) can form highly explosive mixtures in combination with air. This is why switching to low-GWP refrigerants means refrigerating plants and integrated components with special construction requirements and variants. They are specified in European standard DIN EN 378.

## Play it safe with ebm-papst.

To provide a safe cooling solution, all our motors and complete systems meet the European standard EN 60335-2-24 or -89 (Household appliance standard) as standard. This is fully adequate for most refrigerated display cases, since their cooling circuits work with the 150 or 500 g maximum refrigerant quantity required by the standard. In these cases, ATEX components are usually not necessary.

For refrigerating plants with over 150 or 500 g refrigerant, it may make sense to divide the plants into several circuits. If that is not possible, we also offer a suitable solution: ebm-papst fans with energy-saving motors with ATEX approval II 3G nA IIA T4. They meet ATEX standard EN 60079 and are therefore also approved for use in large refrigerated display cases, composite and cascade systems.

#### Measuring requirements

Air performance measured according to: ISO 5801, installation category A, in ebm-papst full nozzle without contact protection.  
Intake-side sound level: L<sub>w</sub>A according to ISO 13347, L<sub>p</sub>A measured at 1 m distance from fan axis. The values given are only applicable under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked in installed condition.

#### Material/surface

- Housing: plastic
- Impeller: plastic

#### Mechanical data

- Number of blades: 7
- Direction of airflow: blowing over struts ("V")
- Direction of rotation: counter-clockwise viewed toward rotor
- Degree of protection: IP 55
- Insulation class: "B"
- Installation position: any
- Mode: continuous operation (S1)
- Mounting: maintenance-free ball bearings

#### Electrical data

- Motor protection: thermal overload protector (TOP) internally connected
- Electrical hookup: cable for connection on motor side
- Cable exit: lateral
- Protection class: II
- Speed levels: 2 (programmable)

#### EMC

- Immunity to interference: according to EN 61000-6-2 (industrial environment)
- Interference emission: according to EN 61000-6-3 (household environment)
- System disturbance: according to EN 61000-3-2/3

#### Standards and approvals

- Conformity with standards: EN 60335-1; EN 60335-2-24; EN 60335-2-80; EN 60335-2-89; CE
- Approvals:
  - A UL 1004-3 + 60730-1; EAC; VDE; CSA C22.2 No. 77 + CAN/CSA-E60730-1
  - B UL 1004-3 + 60730-1; EAC; VDE; CCC; CSA C22.2 No. 77 + CAN/CSA-E60730-1

## Measuring requirements

Air performance measured according to: ISO 5801, installation category A, in ebm-papst full nozzle without contact protection.  
Intake-side sound level:  $L_w$  A according to ISO 13347,  $L_p$  A measured at 1 m distance from fan axis. The values given are only applicable under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked in installed condition.

## Material/surface

- Housing: plastic
- Impeller: plastic

## Mechanical data

- Number of blades: 5
- Direction of airflow: blowing over struts ("V")
- Direction of rotation: counter-clockwise viewed toward rotor
- Degree of protection: IP 55
- Insulation class: "B"
- Installation position: any
- Mode: continuous operation (S1)
- Mounting: maintenance-free ball bearings

## Electrical data

- Motor protection: electronic
- Electrical hookup: cable for connection on motor side
- Cable exit: lateral
- Protection class: II
- Speed levels: 2 (not programmable)

## Standards and approvals

- Conformity with standards: EN 60335-1; EN 60335-2-24; EN 60335-2-80; EN 60335-2-89; CE
- Approvals:
  - A** EAC; VDE
  - B** EAC; VDE; UL 1004-7 + 60730; CSA C22.2 No. 77 + CAN/CSA-E60730-1

#### Measuring requirements

Air performance measured according to: ISO 5801, installation category A, in ebm-papst full nozzle without contact protection.  
Intake-side sound level:  $L_wA$  according to ISO 13347,  $L_pA$  measured at 1 m distance from fan axis. The values given are only applicable under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked in installed condition.

#### Material/surface

- Housing: plastic
- Impeller: plastic

#### Mechanical data

- Number of blades: 5
- Direction of airflow: blowing over struts ("V")
- Direction of rotation: counter-clockwise viewed toward rotor
- Degree of protection: IP 55
- Insulation class: "B"
- Installation position: any
- Mode: continuous operation (S1)
- Mounting: maintenance-free ball bearings

#### Electrical data

- Motor protection: thermal overload protector (TOP) internally connected
- Electrical hookup: cable for connection on motor side
- Cable exit: lateral
- Protection class: II
- Speed levels: with infinitely variable control via RS485 MODBUS-RTU, alternatively 3-stage (manual switching)

#### Standards and approvals

- Conformity with standards: EN 60335-1; EN 60335-2-24; EN 60335-2-80; EN 60335-2-89
- Approvals: UL 1004-3; EAC; CSA C22.2 No. 77

#### Measuring requirements

Air performance measured according to: ISO 5801, installation category A, in ebm-papst full nozzle without contact protection.  
Intake-side sound level:  $L_w$  according to ISO 13347,  $L_p$  measured at 1 m distance from fan axis. The values given are only applicable under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked in installed condition.

#### Material/surface

- Support bracket: plastic
- Impeller: plastic

#### Mechanical data

- Number of blades: 7
- Direction of rotation: clockwise viewed toward rotor
- Degree of protection: IP 55
- Insulation class: "B"
- Installation position: any
- Mode: continuous operation (S1)
- Mounting: maintenance-free ball bearings

#### Electrical data

- Motor protection: thermal overload protector (TOP) internally connected
- Electrical hookup: cable for connection on motor side
- Protection class: II
- Speed levels: 2 (programmable) compatible with plug-in module CCC000-AE\*\*-\*\*

#### EMC

- Immunity to interference: according to EN 61000-6-2 (industrial environment)
- Interference emission: according to EN 61000-6-3 (household environment)
- System disturbance: according to EN 61000-3-2/3

#### Standards and approvals

- Conformity with standards: EN 60335-1; EN 60335-2-24; EN 60335-2-80; EN 60335-2-89; CE
- Approvals:

- A** UL 1004-3; VDE; EAC; CSA C22.2 No. 77  
**B** UL 1004-3; VDE; CCC; EAC; CSA C22.2 No. 77

- Insulation class: "H"
- Installation position: any
- Mode: continuous operation (S1)
- Mounting: maintenance-free ball bearings

## Electrical data

- Motor protection: electronic
- Electrical hookup: cable for connection on motor side (see page 93)
- Protection class: II
- Additional functions: possible on request

## Standards and approvals

- Conformity with standards: DIN EN 60335-1; DIN EN 60335-2-24; DIN EN 60335-2-89; CE; UL1004-1; UL1004-7; C22.2 No.77, C22.2 No.100, C22.2 No. 0.1;
- Approvals: VDE; UL; CSA; EAC

## Additional functions

### NiQ reverse on start.

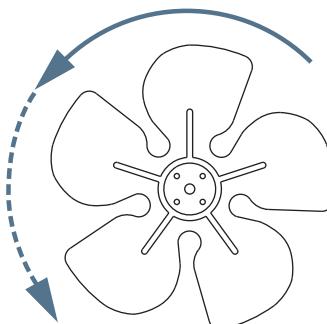

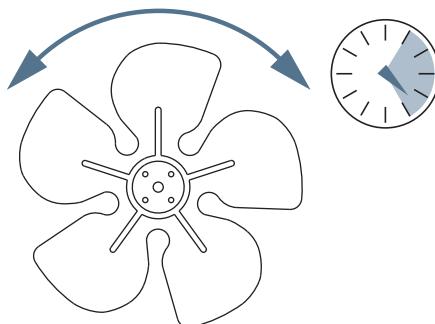

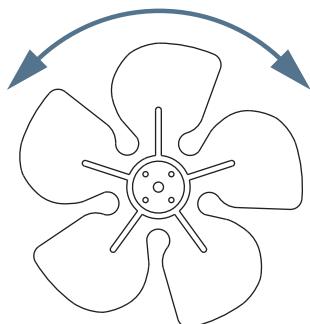

The NiQ reverse on start automatically runs in reverse for a preprogrammed time on starting. An important function for refrigeration devices, as it blows the accumulated dust out of the heat exchanger of the condenser - thus ensuring constant high cooling capacity.

### NiQ reverse on demand.

With the NiQ reverse on demand it is possible to define the time and duration of reverse operation as required. This means that the evaporator defrost cycle can be used to remove dust from the heat exchanger of the condenser for example.

### NiQ two speeds.

The particular feature of the NiQ two speeds is that it is supplied with two factory-programmed speed levels. This makes it possible to run the application in different day and night modes for even greater energy savings.

NiQ 3212 with axial blades Ø 254 mm

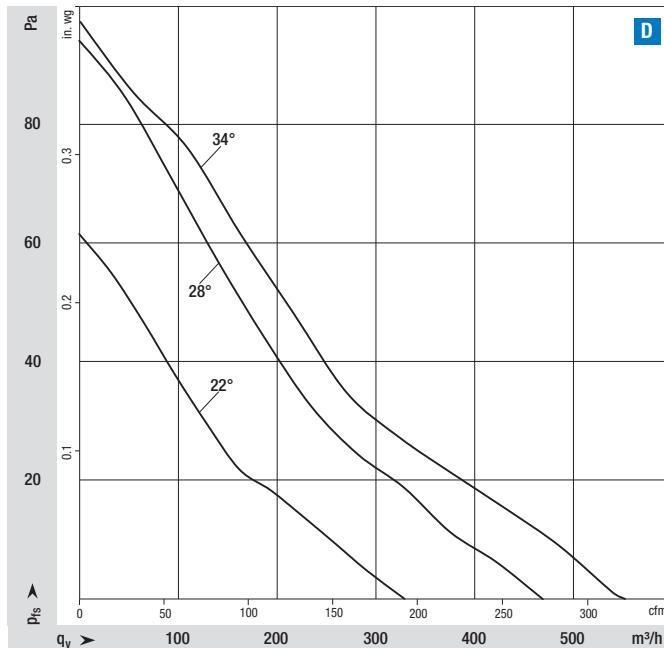

# NiQ: Combination with axial blades

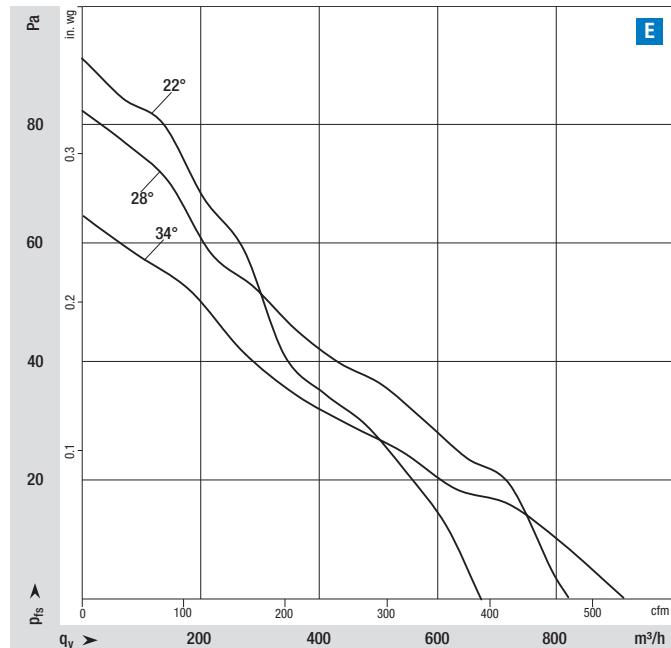

Air performance curves determined in fan housing,  
at a constant speed of 1550 rpm.

Family of air performance curves at 1550 rpm

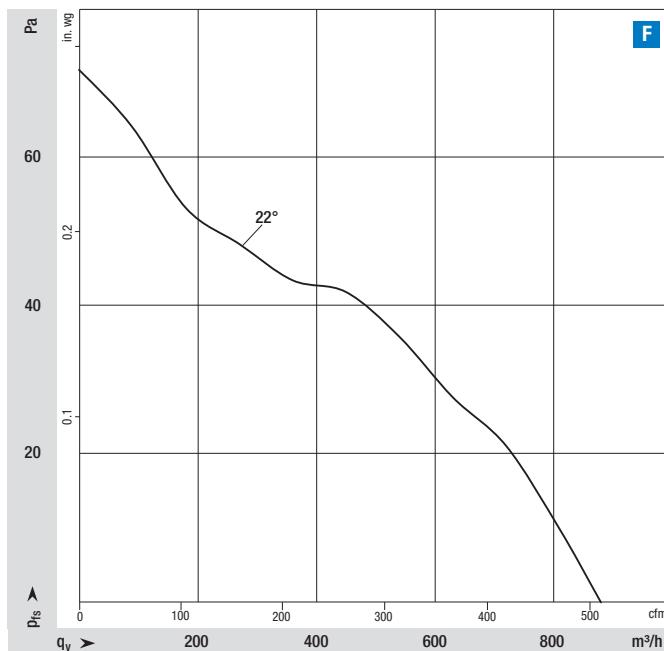

NiQ 3212 with axial blades Ø 200 mm

NiQ 3212 with axial blades Ø 230 mm

NiQ 3212 with axial blades Ø 254 mm

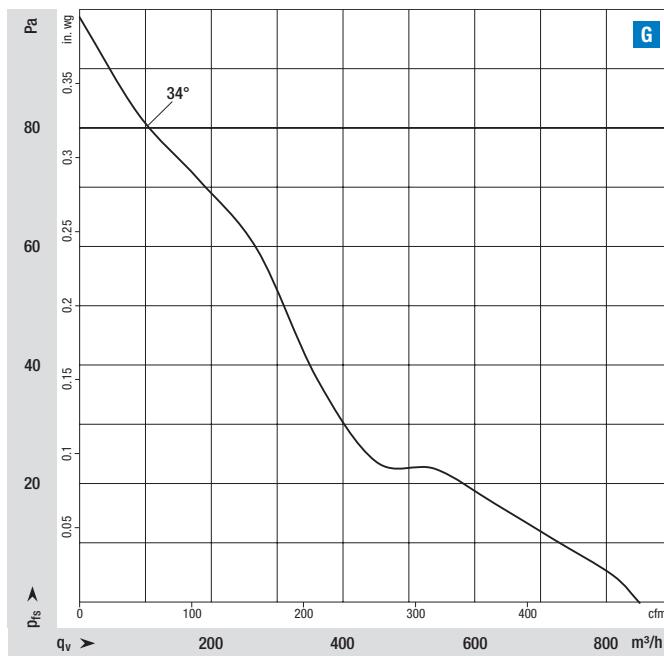

# NiQ: Combination with axial blades

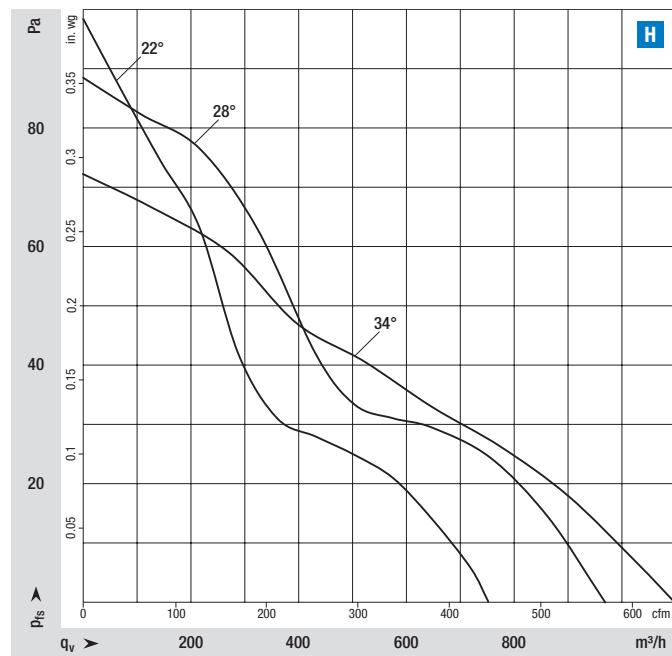

Air performance curves determined in fan housing,  
at a constant speed of 1300 rpm.

Family of air performance curves at 1300 rpm

NiQ 3224 with axial blades Ø 230 mm

NiQ 3224 with axial blades Ø 254 mm

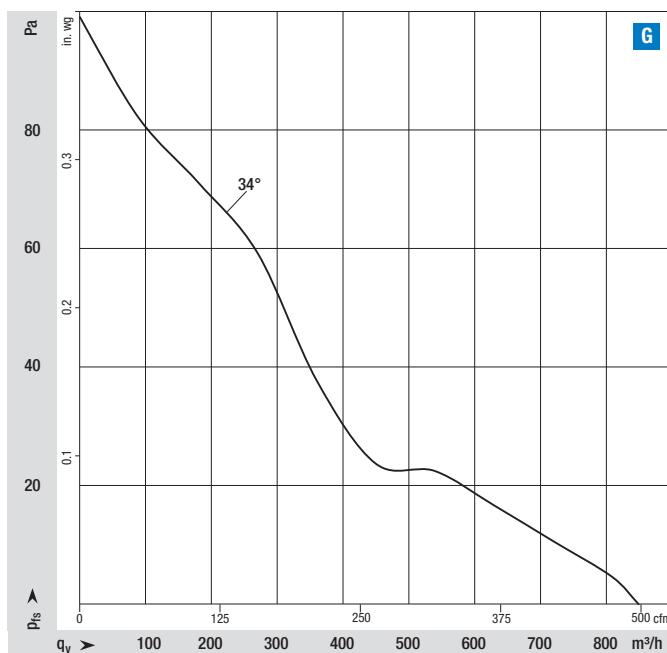

# NiQ: Combination with axial blades

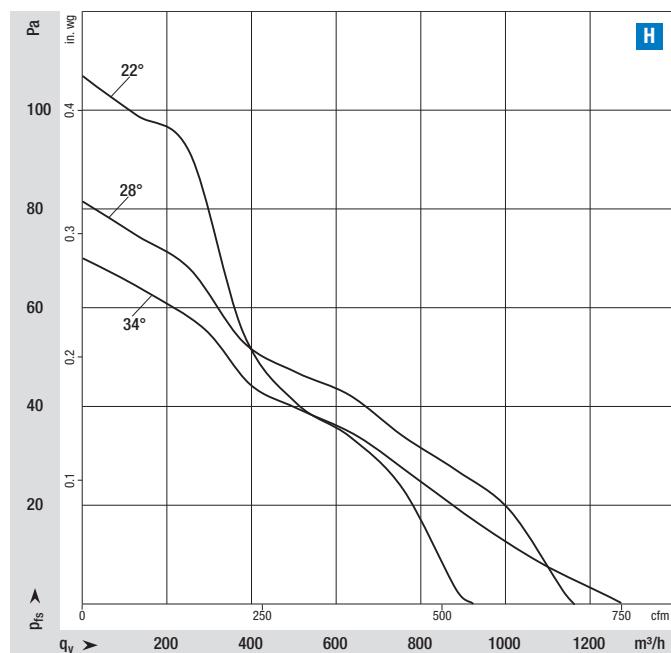

Air performance curves determined in fan housing,  
at a constant speed of 1550 rpm.

Family of air performance curves at 1550 rpm

# Hand-held programmer

## Hand-held programmer for products based on energy-saving motor (ESM)

Part number	Design
CBC000AF0801	Simple speed programming, battery-operated User-friendly navigation menu, protective case with folding stand

Subject to change.  
Extension for models ESM+ only.

## Replacement programming cable for hand-held unit

Part number	Length (mm)
29005-4-1040	1000

Subject to change.

Extremely simple programming of the two rotational speeds which can be set under ESM. Eliminates the need for a PC, software, power adapter and second cable. Specially for use in production or in the field. Automatic switch-off function for a longer battery life. Mini-USB connector for downloading software updates. Batteries, programming cable and operating instructions included in scope of delivery.

See Page 80 for different modes of operation.

# Plug-in module

## External electronics / ESM plug-in module

Part number	Design
CCC000AE0907	115 V, 50/60 Hz, control curve 1V - 10V => 10 % - 100 %, length control line: 1000 mm, length supply line: 450 mm
CCC000AE0806	230 V, 50/60 Hz, control curve 1V - 10V => 10 % - 100 %, length control line: 1000 mm, length supply line: 450 mm
CCC000AE0810	230 V, 50/60 Hz, control curve 1V - 10V => 10 % - 100 %, length control line: 3000 mm, length supply line: 3000 mm

Subject to change.  
Extension for models ESM+ only.

The plug-in module extends the ESM product range with the addition of a 0-10 V control input and can be retrofitted for the programmable ESM fans in this catalog. Compatible fans can be recognized from the "ESM+ enabled" label.

# Air-inlet grille FlowGrid

## Air-inlet grille FlowGrid

Part number	Fan size	$\varnothing$ B (mm)	$\varnothing$ C (mm)	$\varnothing$ E (mm)	S (mm)	H (mm)	N* (mm)
00250-2-2957	200	205	193	4.5	2.0	37.7	$1^{+0.2}$ Nm

Subject to change.  
Only for K1G200-AA95-02 and K1G200-AA73-02.

\* recommended tightening torque for fastening screws

The air performance of ebm-papst fans is not the only thing measured on the state-of-the-art, in-house test stand.

The acoustic behavior of the fans is also examined and the measuring results are included in the technical documentation. Please note that the measurements are taken under ideal conditions with undisturbed inflow and outflow.

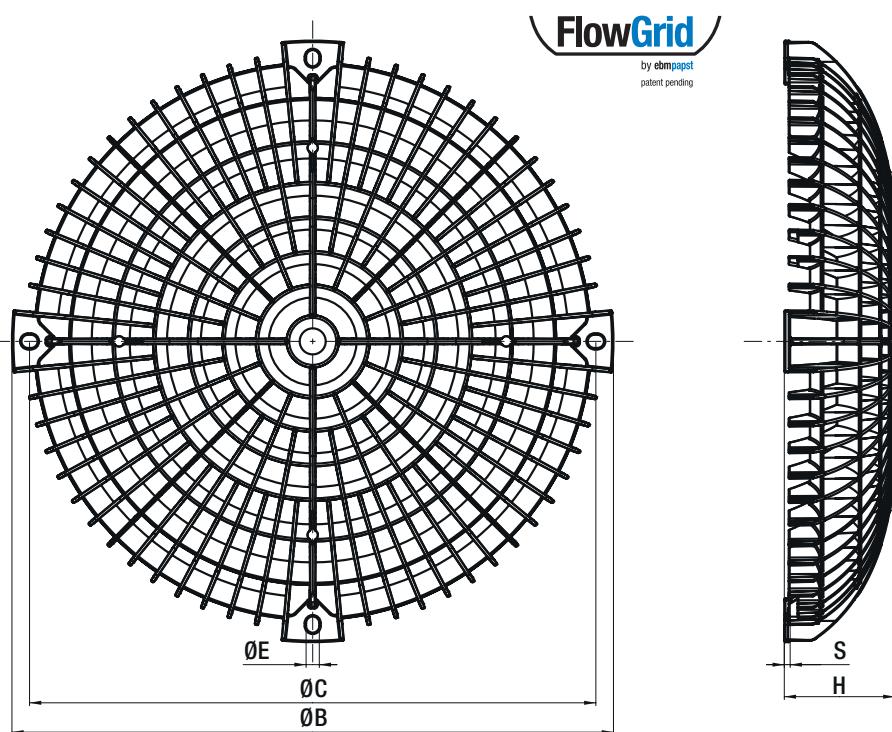

If the fans are later installed in applications where limited space is available, the noise information listed in the documentation will probably not be applicable.

In order to minimize the negative impact of the installation situation, ebm-papst offers the FlowGrid airinlet guard shown here.

It is mounted on the fan's intake side and effectively reduces the noise in the fan's overall frequency range; especially the disturbing tonal noise in the low frequency range.

The result is a far lower sound pressure level and pleasant running noise.

Since the level of noise reduction is dependent on the installation circumstances, it is not possible to provide generally applicable information here.

Would you like  
to find out more?

If you need an  
installation guide  
or more information  
about the dimensions,  
go to:

# Air-inlet grille FG 119

## Material/surface

- PA plastic, fiberglass-reinforced

## Note

- For axial and diagonal fans
- Assembled on the air intake, the fan grid reduces the noise emission dramatically and minimizes disturbing low frequency sound

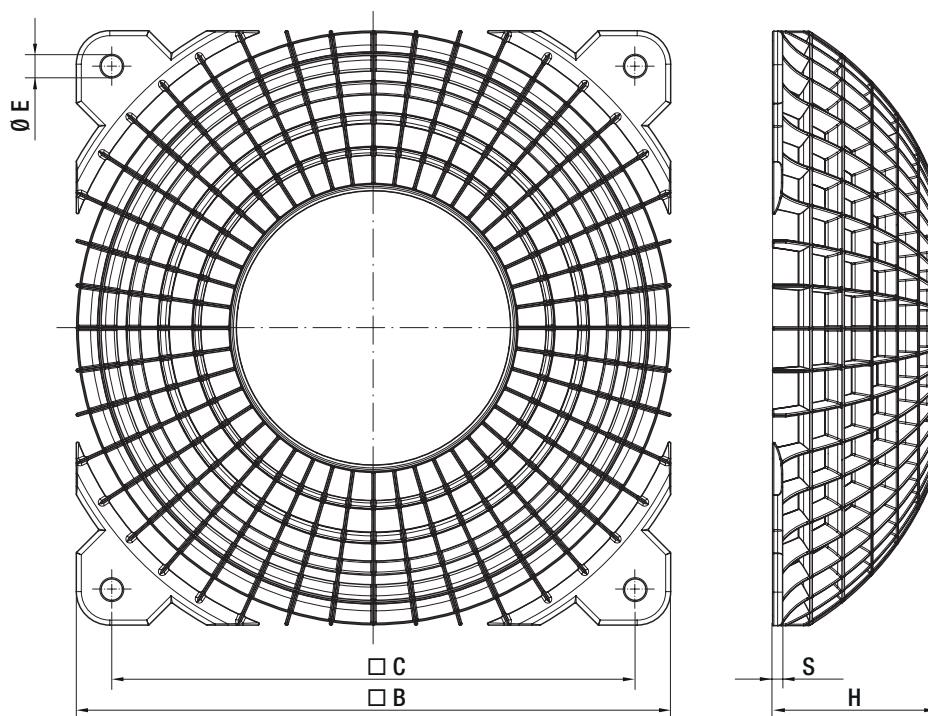

## Side

- Intake side

## Air-inlet grille

Part number	Fan size	□ B (mm)	□ C (mm)	Ø E (mm)	S (mm)	H (mm)	Fan series
9920070000	119 x 119	119 <sup>±0.3</sup>	104.8	4.3 <sup>±0.15</sup>	2 <sup>±0.2</sup>	32.62 <sup>±0.3</sup>	ACi 4400 N, ACi 4400, 4300 N

Subject to change.

# Guard grilles

for compact fans

## Guard grilles

9920030003	LZ30-3			
9920030004	LZ30-4			

Subject to change.

### Material/surface

- Galvanized or nickel-plated steel wire

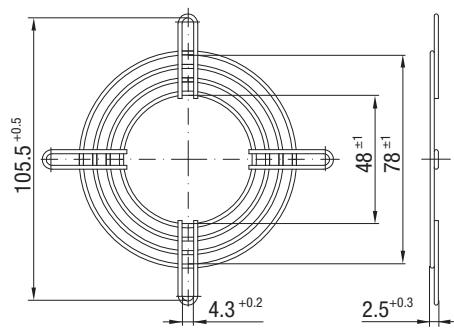

### Note

- Guard grilles according to DIN EN ISO 13857 (previously EN 294).
- Additional guard grilles that do not satisfy DIN EN ISO 13857 available on request.
- Our guard grilles are designed specifically to be used with ebm-papst fans. They combine the highest degree of safety with minimum effect on the operating noise. Please note that the safety-related clearances cannot be guaranteed when guard grilles made by other manufacturers are used.

# Connection diagram: ESM1)

## Technical features

- Speed selection max/min
- Reverse polarity protection
- Power limiter
- Motor current limitation
- Soft start
- Thermal overload protection for motor
- Speed setting input (230 V)
- Thermal overload protector (TOP) internally connected
- ESM+ expandable with plug-in module

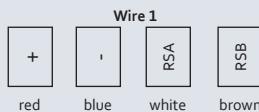

Wire	Designation	Colour	Assignment / function
1	N	blue	Power supply, neutral conductor, see nameplate for voltage range
	L	black	Power supply, phase, see nameplate for voltage range
	SL	brown	Speed selection: switch open speed 1, switch closed speed 2

# Connection diagram: ESM2)

## Technical features

- Speed setting input
- Speed monitoring Hall IC
- Motor current limitation
- Emergency operation
- RS485 MODBUS-RTU
- Special function automatic speed switching
- Special function automatic speed switching and reversal of rotation
- Thermal overload protection for motor
- Reverse polarity protection
- Thermal overload protector (TOP) internally connected

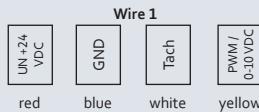

Wire	Designation	Colour	Assignment / function
1	+	red	Power supply, see nameplate for voltage range
	-	blue	Power supply, see nameplate for voltage range
	RSA	white	RS-485 interface for MODBUS RSA/switching input
	RSB	brown	RS-485 interface for MODBUS RSB/switching input

# Connection diagram: ESM3)

## Technical features

- Tach output
- Motor current limitation
- Soft start
- Control input 0-10 VDC / PWM
- Thermal overload protection for electronics/motor
- Thermal overload protector (TOP) internally connected

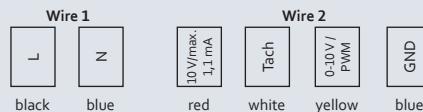

Wire	Designation	Colour	Assignment / function
1	UN +24 VDC	red	Power supply 24 VDC, maximum ripple 3.5 %
	GND	blue	Reference ground
	Tach	white	Tach output, 1 pulse per revolution, Isink max = 10 mA, open collector
	PWM/0-10 VDC	yellow	Control input PWM or 0-10 V, RE > 100k

# Connection diagram: ESM4)

## Technical features

- Speed setting input (230 V)
- ESM+ expandable with plug-in module
- Soft start
- Thermal overload protection for motor
- Tach output
- Output 10VDC, max. 1.1 mA
- Thermal overload protector (TOP) internally connected
- Control input 0-10VDC / PWM

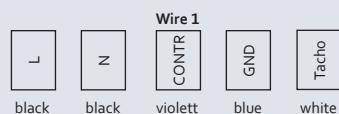

Wire	Designation	Colour	Assignment / function
1	L	black	Power supply, see nameplate for voltage range
	N	blue	Neutral conductor
2	10V		Voltage output 10V / 1.1 mA, electrically isolated, not short-circuit-proof
	Tach	white	Tach output: Open collector, 1 pulse per revolution, electrically isolated
	0-10V / PWM	yellow	Control input 0-10V or PWM, electrically isolated
	GND	blue	GND connection for control interface

# Connection diagram: ESM5)

## Technical features

- Speed control via analog voltage (5-10 VDC)
- Locked-rotor protection

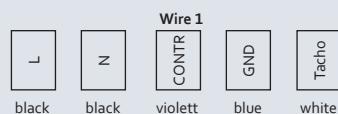

Wire	Designation	Colour	Assignment / function
1	L	black	Power supply
	N	black	Power supply
	CONTR	violett	Speed control
	GND	blue	Weight speed control

	CW	black	Control line

# Technical parameters and scope

## High standards for all ebm-papst products

Here at ebm-papst, we constantly strive to further improve our products in order to be able to offer you the best possible product for your application. Careful monitoring of the market ensures that technical innovations are reflected in the improvements of our products. Based on the technical parameters listed below and the ambience you want our product to operate in, we here at ebm-papst can always work out the best solution for your specific application.

### General performance parameters

Any deviations from the technical data and parameters described here are listed on the product-specific data sheet.

### Degree of protection

The type of protection is specified in the product-specific data sheets.

### Insulation class

The insulation class is specified in the product-specific data sheets.

### Installation position

The mounting position is specified in the product-specific data sheets.

### Condensate discharge holes

Information on the condensate discharge holes is provided in the product-specific data sheets.

### Mode of operation

The mode of operation is specified in the product-specific data sheets.

### Protection class

The protection class is specified in the product-specific data sheets.

### Service life

The service life of ebm-papst automotive products depends:

- The service life of the bearing system

The service life of the insulation system mainly depends on voltage level, temperature and ambient conditions, such as humidity and condensation.

The service life of the bearing system depends mainly on the thermal load on the bearing.

The majority of our products use maintenance-free ball bearings for any mounting position possible.

The service life L10 of the ball bearings can be taken as approx. 40,000 operating hours at an ambient temperature of 40 °C, yet this estimate can vary according to the actual ambient conditions.

We will gladly provide you with a lifetime calculation taking into account your specific operating conditions.

### Motor protection / thermal protection

Information on motor protection and thermal protection is provided in the product-specific data sheets.

Depending on motor type and field of application, the following protective features are realised:

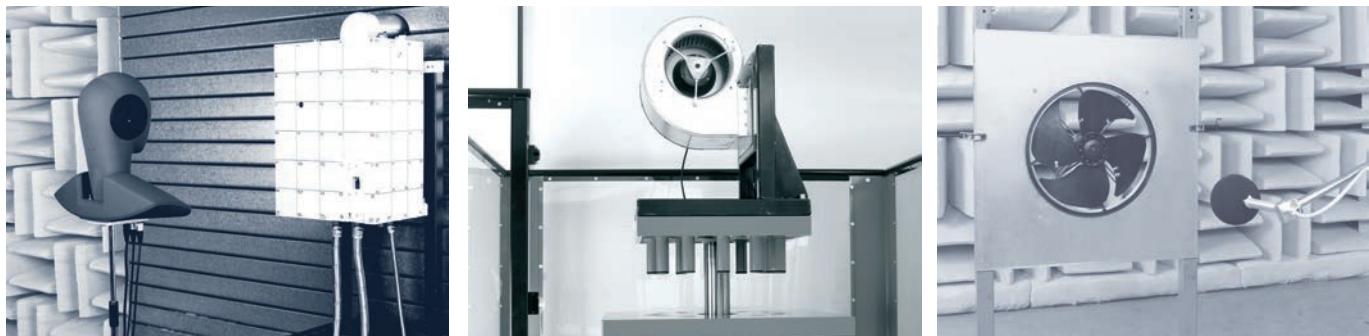

- Thermal overload protector, connected
- PTC/NTC with electronic evaluation
- Current limiting using electronics

### Mechanical strain / performance parameters

All ebm-papst products are subjected to comprehensive tests complying with the normative specifications. In addition to this, the tests also reflect the vast experience and expertise of ebm-papst.

### High voltage and insulation testing

If high voltage or insulation testing is carried out in the application, then all connection lines from the fan must be disconnected in advance.

### Balancing quality

Testing the balancing quality is carried out in compliance with

- Residual imbalance according to DIN ISO 1940
- Standard balancing quality level G 6.3

Should you require a higher balancing quality level for your specific application, please let us know and specify this when ordering your product.

### Chemo-physical strain / performance parameters

Should you have questions about chemo-physical strain, please direct them to your ebm-papst contact.

### Fields of application, industries and applications

Our products are used in various industries and applications:

The products in this catalogue have been specifically configured for use in the rail industry!

### Legal and normative directives

The products described in this catalogue are designed, developed and produced in keeping with the standards in place for the relevant product and, if known, the conditions governing the relevant fields of application.

### Standards

Information on standards is provided in the product-specific data sheets.

### EMC

Information on EMC standards is provided in the product-specific data sheets. Complying with the EMC standards has to be established on the final appliance, as different mounting situations can result in changed EMC properties.

### Approvals

In case you require a specific approval for your ebm-papst product (e1, UL, etc.) please let us know.

Most of our products can be supplied with the relevant approval. Information on existing approvals is provided in the product-specific data sheets.

### Air performance measurements

All air performance measurements are carried out on suction side and on chamber test beds conforming to the specifications as per ISO 5801 and DIN 24163. The fans under test are installed in the measuring chamber at free air intake and exhaust (installation category A) and are operated at nominal voltage, with AC also at nominal frequency, and without any additional components such as guard grilles.

As required by the standard, the air performance curves correspond to an air density of 1.15 kg/m<sup>3</sup>.

# Technical parameters and scope

## Measurement conditions for air and noise measurement

ebm-papst products are measured under the following conditions:

- Axial and diagonal fans in direction of rotation "V" in full nozzle and without guard grill
- Backward curved centrifugal fans, free-running and with inlet nozzle
- Forward curved single and dual inlet centrifugal fans with housing

## Noise measurements

All noise measurements are carried out in low-reflective test rooms with reverberant floor. Thus the ebm-papst acoustic test chambers meet the requirements of precision class 1 according to DIN EN ISO 3745. For noise measurement, the fans being tested are placed in a reverberant wall and operated at nominal voltage (for AC, also at nominal frequency) without additional attachments such as the guard grill.

## Sound pressure level and sound level

All acoustic values are established according to ISO 13347, DIN 45635 and ISO 3744/3745 to accuracy class 2 and given in A-rated form.

When the sound pressure level ( $L_p$ ) is measured, the microphone is on the intake side of the fan being tested, usually at a distance of 1 m on the fan axis.

To measure the sound power level ( $L_w$ ) 10 microphones are distributed over an enveloping surface on the intake side of the fan being tested (see graphic). The sound power level measured can be roughly calculated from the sound pressure level by adding 7 dB.

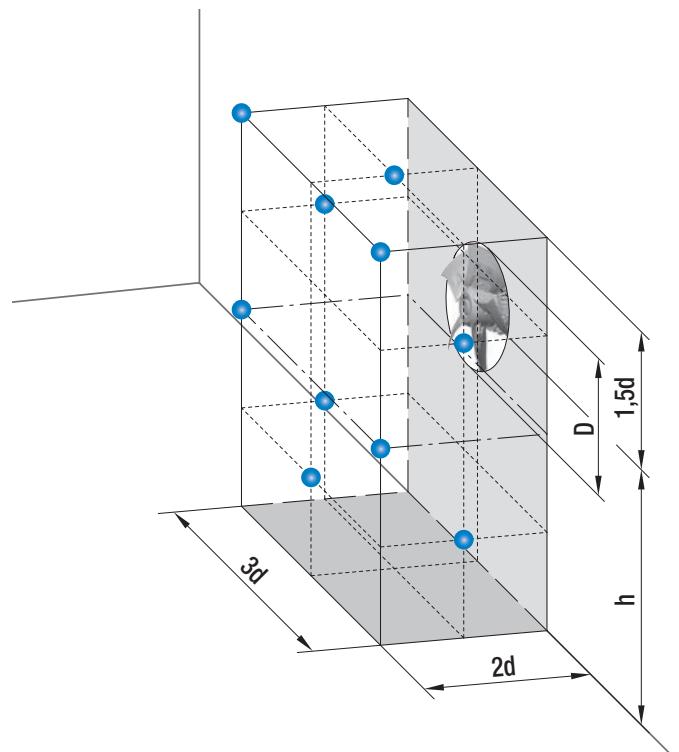

## Measuring configuration as per ISO 13347-3 bzw. DIN 45635-38:

- 10 measuring points

$d \geq D$

$h = 1.5d \dots 4.5d$

Measurement area  $S = 6d^2 + 7d(h + 1.5d)$

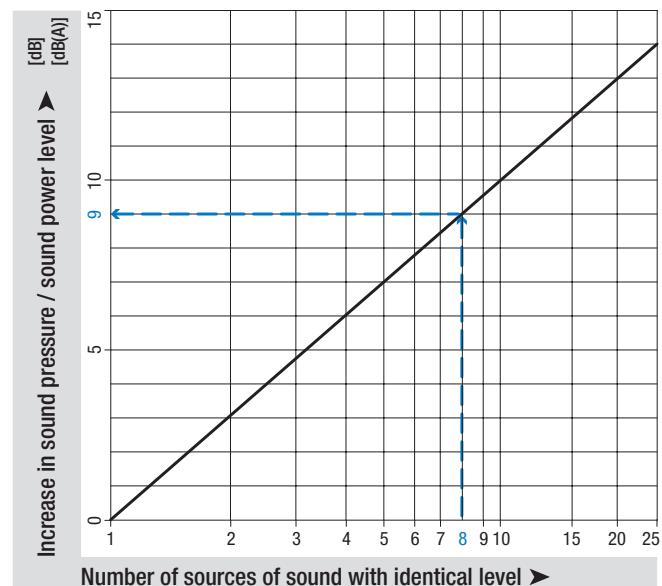

### Combined level of multiple same-level sound sources

Adding 2 noise sources with the same level results in a level increase of approx. 3 dB.

The noise characteristics of multiple identical fans can be determined in advance based on the noise values specified in the data sheet. This is shown in the diagram opposite.

Example: 8 A3G800 axial fans are on a condenser. According to the data sheet, the sound pressure level of a fan is approximately 75 dB(A). The level increase measured from the diagram is 9 dB. Thus the overall sound level of the installation can be expected to be 84 dB(A).

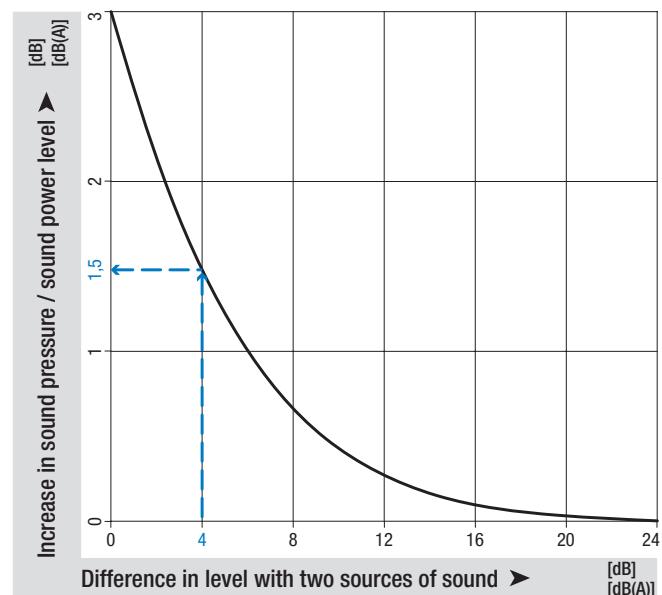

### Combined level of two different-level sound sources

The acoustic performance of two different fans can be predetermined based on the sound levels given in the data sheet. This is shown in the diagram opposite.

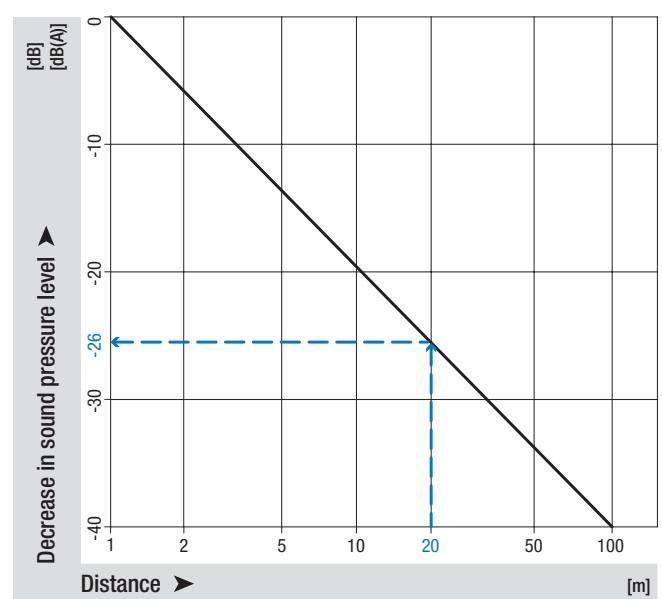

Example: There is an axial fan A3G800 with a sound pressure level of 75 dB(A) at the operating point and an axial fan A3G710 with 71 dB(A) in a ventilation unit. The level difference is 4 dB.

The level increase can now be read in the diagram as approx. 1.5 dB. This means that the overall sound level of the unit can be expected to be 76.5 dB(A).

### Distance laws

Sound power level is independent of distance to the sound source. In contrast to this, sound pressure level decreases the further away the noise source is. The adjacent diagram shows the decrease in level under far sound field conditions. Far sound field conditions apply whenever the distance between microphone and fan is big when compared to fan diameter and wavelength to be considered. For more information on far sound field, please consult the relevant literature on this complex topic. Per doubling of distance, the level in the far sound field decreases by 6 dB. In the near field of the fan, other correlations apply and the decrease in levels can be considerably smaller. The following example only applies to far sound field conditions and can vary strongly depending on the installation effects: With an axial fan A3G300, a sound pressure level of 65 dB(A) was measured at a distance of 1 m. According to the adjacent diagram, at a distance of 20 m we would get a reduction by 26 dB, i.e. a sound pressure level of 39 dB(A).

# Technical parameters and scope

## Aerodynamics fundamentals:

Further information can be found in our brochure "Technology - Basic principles"

### Axial fan operating range:

To the right of the saddle point (right section of the air performance curve):

- Maximum efficiency
- Minimum noise

To the left of the saddle point (left section of the air performance curve):

- Stall
- Irruptive efficiency
- Noise suddenly increases

The fan's optimal range of use is highlighted in green in the adjoining performance curve.

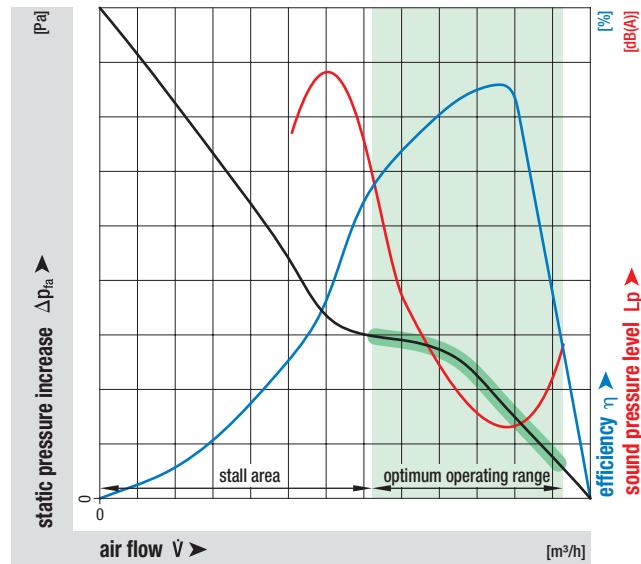

### Effects of guard grill:

Installing a guard grill reduces the axial fan's air performance.

The pressure loss in Pa can be roughly calculated using the following equation:

$$\Delta p_{SG} = \epsilon_{SG} \cdot 10^{-8} \cdot \dot{V}^2 \quad \dot{V} \text{ in } [\text{m}^3/\text{h}]$$

For the guard grill that ebm-papst used, the correction factor  $\epsilon_{SG}$  dependent on impeller diameter D can be found in the adjoining table.

Diameter D	Correction factor $\epsilon_{SG}$
400	90
450	55
500	35

### Centrifugal fan operating range:

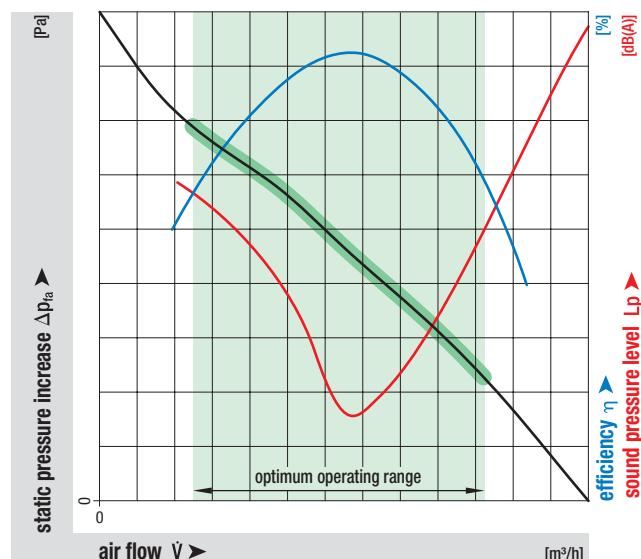

Middle section of the air performance curve:

- Maximum efficiency
- Minimum noise

To the left and right of the middle section of the air performance curve:

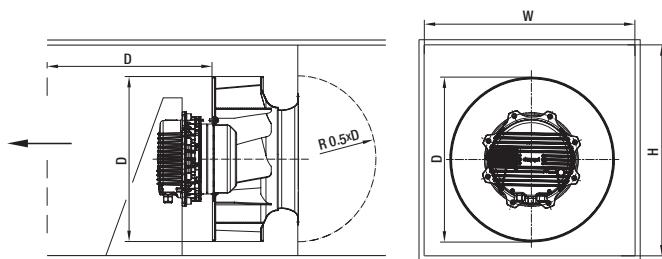

- Reduced efficiency
- Increasing noise

The fan's optimal range of use is highlighted in green in the adjoining performance curve.

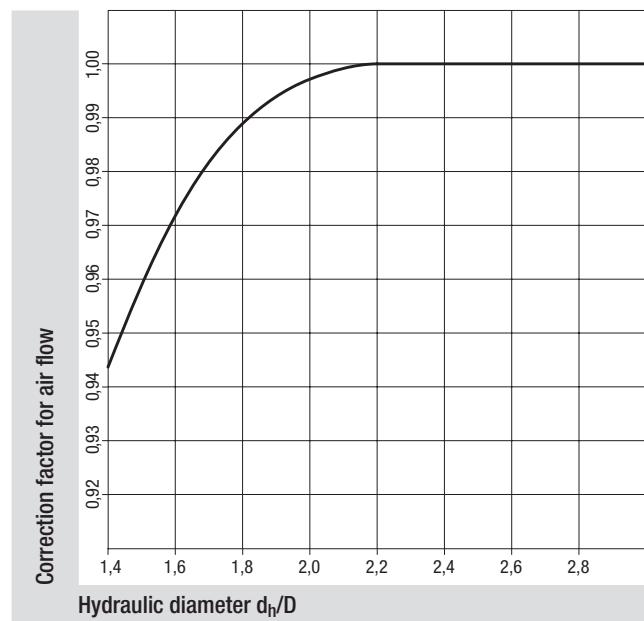

## Effects of installation space

Installation in a square box may cause a reduction of the air performance.

- $d_h$  = hydraulic diameter  
Formula:  $d_h = 2 \times W \times H / (W + H)$
- W = Width of the box
- H = Height of the box
- D = Outside diameter of the fan

## Airflow determination for inlet rings with pressure tap:

The differential pressure method compares the static pressure upstream of the inlet ring with the static pressure in the inlet ring.

The airflow can be calculated from the differential pressure (between the static pressures) according to the following equation:

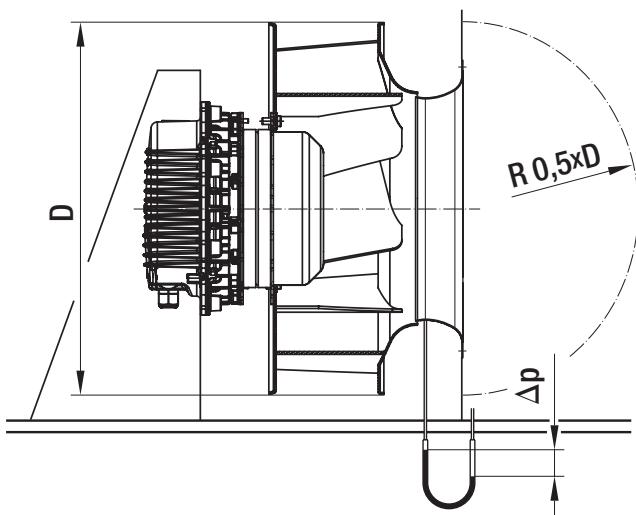

$$q_V = k \cdot \sqrt{\Delta p} \quad q_V \text{ in } [\text{m}^3/\text{h}] \text{ and } \Delta p \text{ in } [\text{Pa}]$$

If the airflow is to be regulated to remain constant, the inlet pressure must be kept constant:

$$\Delta p = q_V^2 : k^2$$

k takes the specific properties of the inlet ring into account.

The pressure is tapped at 1 (4) point(s) on the circumference of the inlet ring. The customer connection consists of a built-in T-shaped hose fitting. The hose fitting is suitable for pneumatic hoses with an inside diameter of 4 mm.

## Influence of speed n on the sound power level Lw:

The sound power level for changes in speed can be approximately determined based on the adjoining diagram and the following formula:

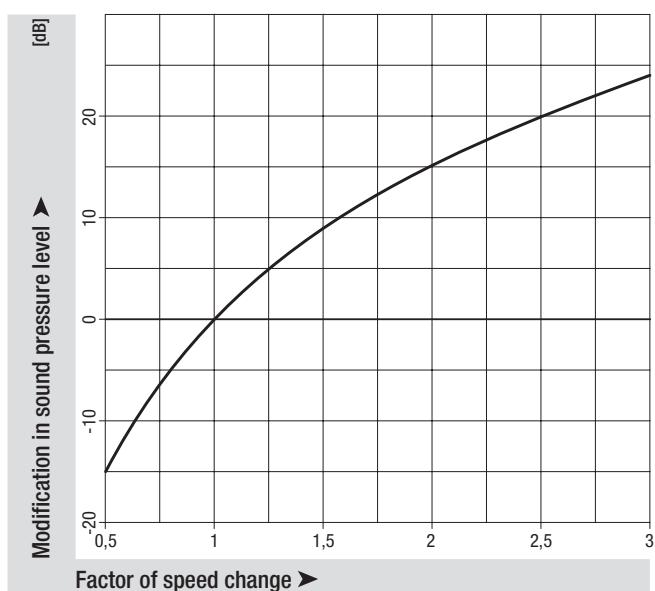

$$Lw_2 - Lw_1 = 50 \text{ dB} \cdot \log (n_2 : n_1)$$

$Lw_1$  = Sound power level after speed change

$Lw_2$  = Sound power level before speed change

$n_1$  = Changed speed

$n_2$  = Initial speed
