

## AxiEco fans for vehicle technology

### ebm-papst at the 2023 Busworld

**The Busworld trade fair will be held again for the first time in four years between October 7 and 12, 2023, after it was canceled in autumn 2021 due to the pandemic. ebm-papst will once again be taking part at the industry meeting for buses in Brussels at Booth 521 in Hall 5 and will be presenting new products for bus air conditioning and battery cooling, particularly for battery electric vehicles.**

Components installed in vehicle technology, such as fans, are exposed to harsh ambient conditions. They have to withstand road dirt, small particles and chemically aggressive contamination. Assemblies must be designed to withstand vibration and shock loads in a tight space. That is why ebm-papst offers particularly robust and quiet fans for this application. After all, electric mobility means that the components' noise emissions play a greater role. As the diesel engine is replaced by an electric motor, the fan comes to the fore as the loudest source of noise.

#### Cooling buses quietly

The size 400 AxiEco axial fans from ebm-papst are specially designed for use in vehicle technology. Aerodynamic optimizations of the impeller achieve a better and even air flow, and the noise level has been significantly reduced again. As a result, noise emissions for this application have been reduced by 12 dB (A) compared to conventional axial fans. The AxiEco is equipped with a continuously adjustable BLDC motor. The fans are maintenance-free and groundbreaking in global commercial vehicle applications. The electronics meet the requirements for the IP6K9K degree of protection, meaning that they withstand use of high-pressure cleaners.

#### Battery cooling system in electric buses

For an electric bus to be operated in an energy-efficient manner, it is necessary to keep the temperature of the battery, and other components, at an optimum temperature range. Batteries have an ever higher capacity, extending the range of the buses, but the batteries' cooling requirements are also increasing. For battery cooling, ebm-papst has the size 310 RadiCal centrifugal fan in its product range, which runs particularly quietly and almost imperceptibly in quiet electric buses.

You can register for a free trade show ticket at [ebmpapst.com/registration](https://ebmpapst.com/registration). The ticket is valid for the trade show from October 7-12, 2023.

### About ebm-papst

The ebm-papst Group, a family-run company headquartered in Mulfingen, Germany, is the world's leading manufacturer of fans and motors. Since it was founded in 1963, the technological leader has set international industry standards with its core competencies in motor technology, electronics, digitalization, and aerodynamics. ebm-papst offers sustainable, intelligent, and tailor-made solutions for virtually every requirement in ventilation and heating technology.

In the 2022/23 financial year, the Group generated turnover of EUR 2.540 billion. It employs just under 15,000 people at 30 production sites (including in Germany, China, and the U.S.) and in 50 sales offices worldwide. ebm-papst sets the benchmark in almost all sectors, such as ventilation, air conditioning and refrigeration technology, heating technology, information technology, mechanical engineering, intralogistics, and medical technology.
